**CONVEX CROWNS-OSR**

To calculate convex radius, you will require 3 straight edges:

**Calculating A: (Width)**  
 Place straight edge at the top of the curve, parallel to the wall.  
 Measure the length from where the long straight edge crosses the two short ones.

**Calculating B: (Rise)**  
 Distance from the wall to the straight edge.

**Outside Radius (OSR)**

**View from above**

**CONCAVE CROWNS-ISR**

To calculate concave radius, you will require 2 straight edges:

**Calculating A: (Width)**  
 Measure the straight distance from the beginning of the curve to the end of the curve.

**Calculating B: (Rise)**  
 Find the center of A, then measure a straight distance from that point to the center of the curved wall.

**Inside Radius (ISR)**

**View from above**
